Data Center Hose Cleaning System

Hanna Nozzles

Projectile Gun

HANNA-CLEAN32 SYSTEM

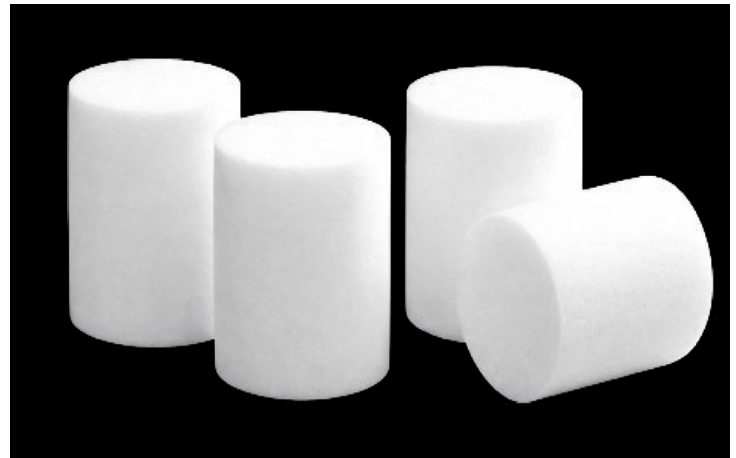

The foam projectiles used in our Data Center Hose Cleaning System are designed to mechanically wipe the inside diameter of hose, tube, or pipe as they are propelled through using our pneumatic gun. All projectiles supplied with our system are manufactured from virgin foam materials with a controlled cell structure and density.

This ensures consistent performance and reliable cleaning results. When used with proper procedures, these projectiles are capable of supporting hose cleanliness levels consistent with ISO 4406 and ISO 4405 requirements making them well suited for critical data center cooling and fluid conveyance applications.
